

Forge: Multipurpose Launcher

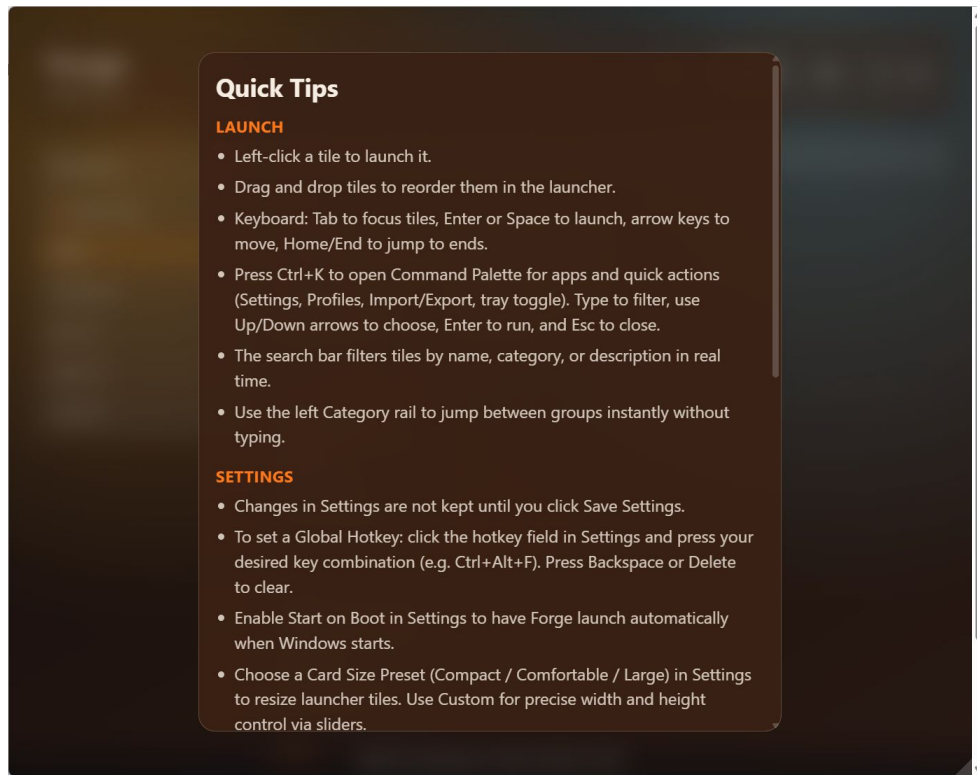

A customizable desktop command center for faster daily workflows

Launch faster. Organize smarter. Recover safely.

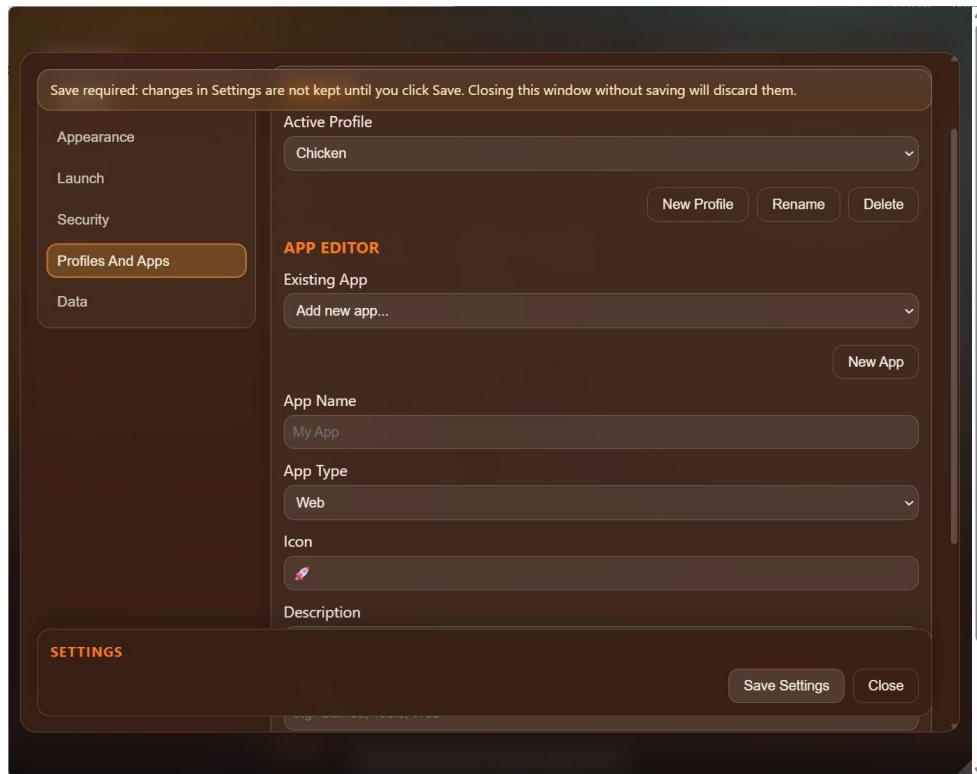

Problem and Opportunity

- Daily context switching wastes time and focus
- Existing launchers are often rigid or shallow
- Users need one place for apps, links, and routine actions
- Opportunity: combine speed, customization, and resilience in one desktop tool

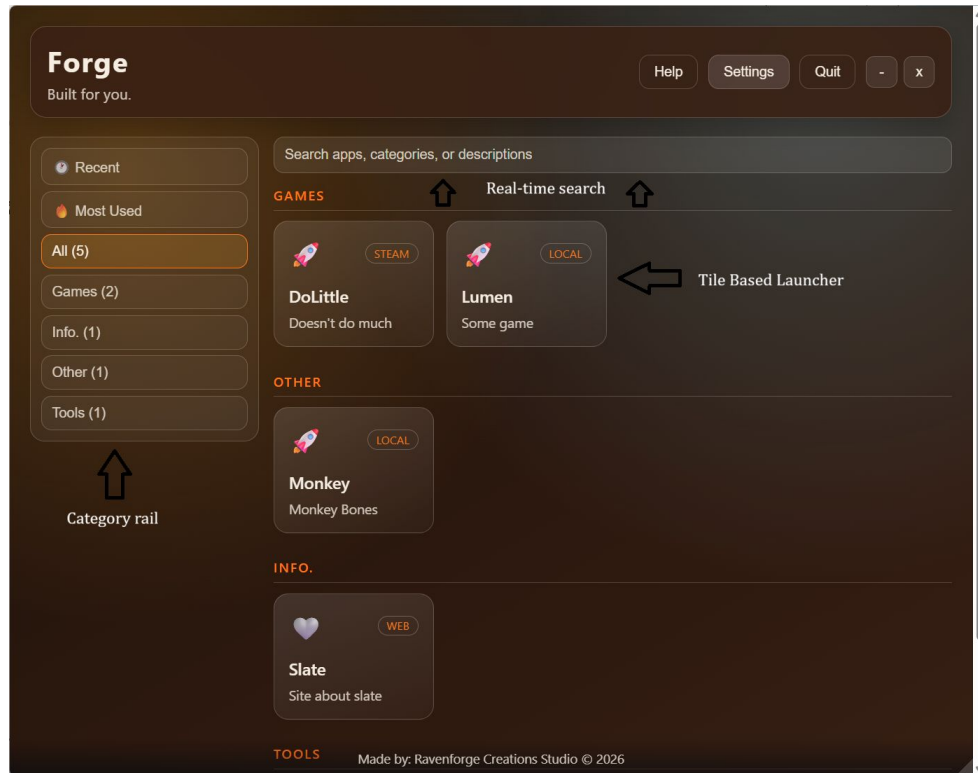

Product Overview

- Desktop launcher built with Electron
- Supports multiple app targets in one interface
- Profiles separate layouts by context (work, gaming, etc.)
- Designed for both mouse-first and keyboard-first users

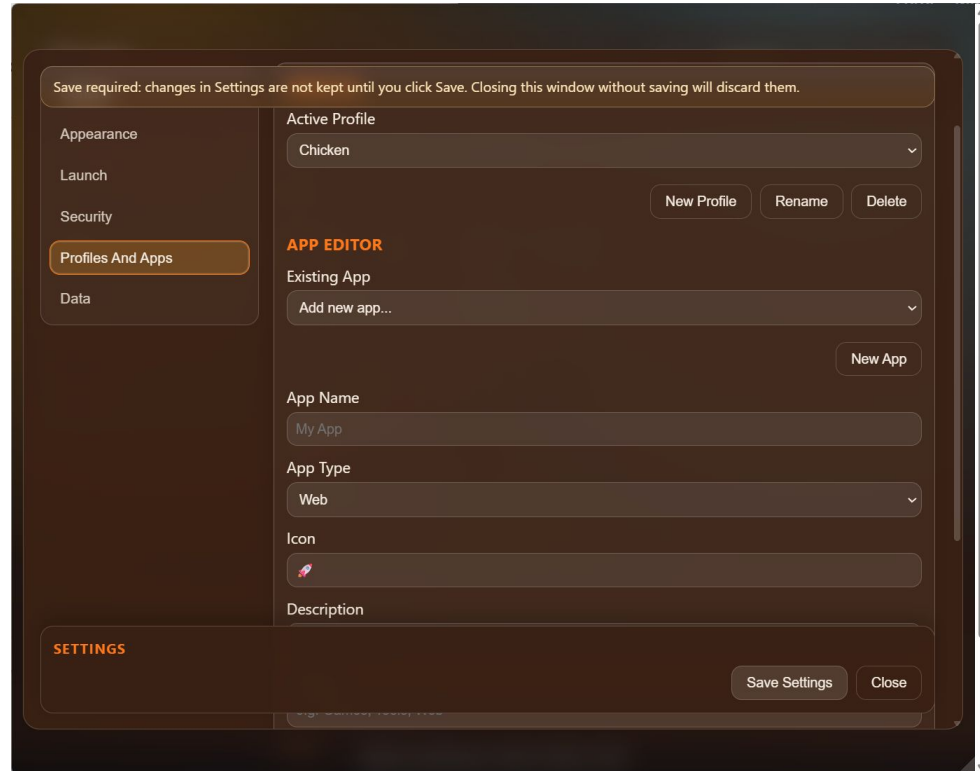

Core User Experience

- - Tile-based launcher with drag-and-drop ordering
- - Category rail for quick filtering
- - Real-time search by name, category, and description
- - Command palette for fast actions and navigation

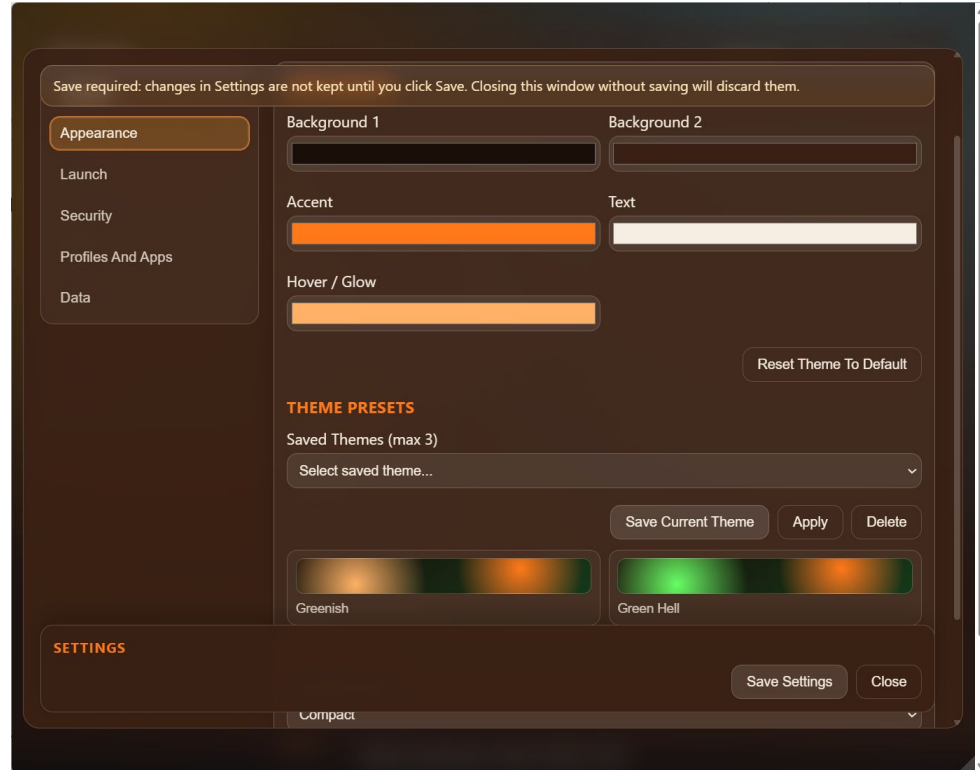

App Types and Profiles

- Supported app types:
 - a. Web URLs
 - b. Local executables/folders
 - c. Steam app launch targets
- Profiles let users switch complete app sets instantly
- App editor supports create/edit/delete with streamlined fields

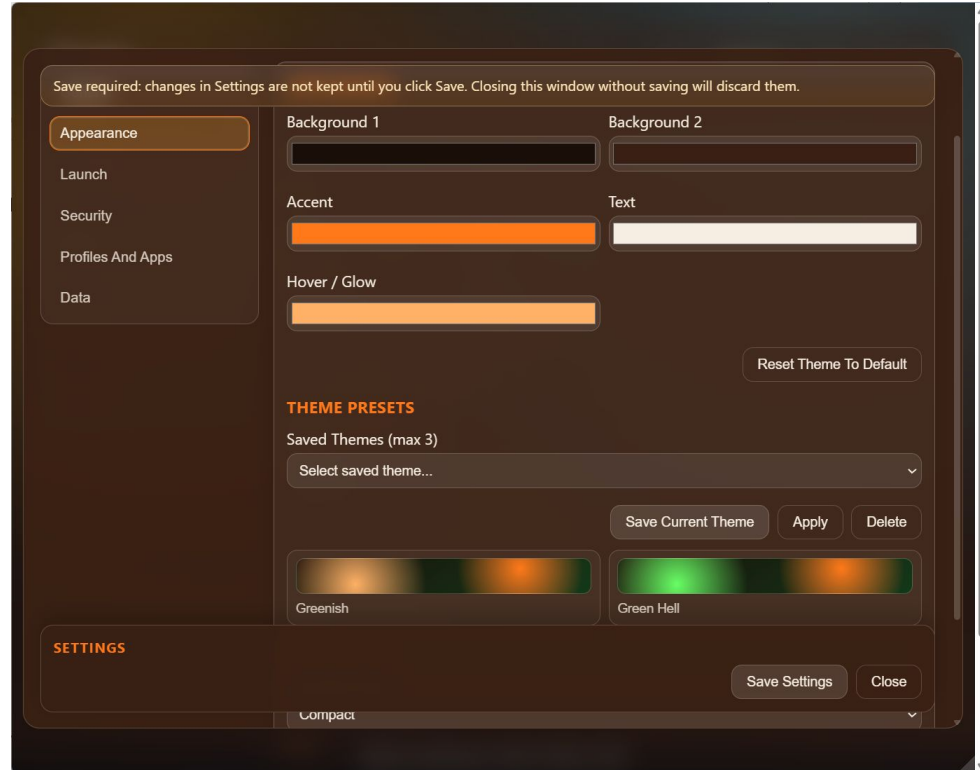

Accessibility and Keyboard System

- - Arrow-key navigation in category rail
- - Settings tabs support ArrowUp/Down, Home/End, Enter/Space
- - Focus trap in modal dialogs to keep navigation predictable
- - Theme preset thumbnails support Left/Right + Enter/Space

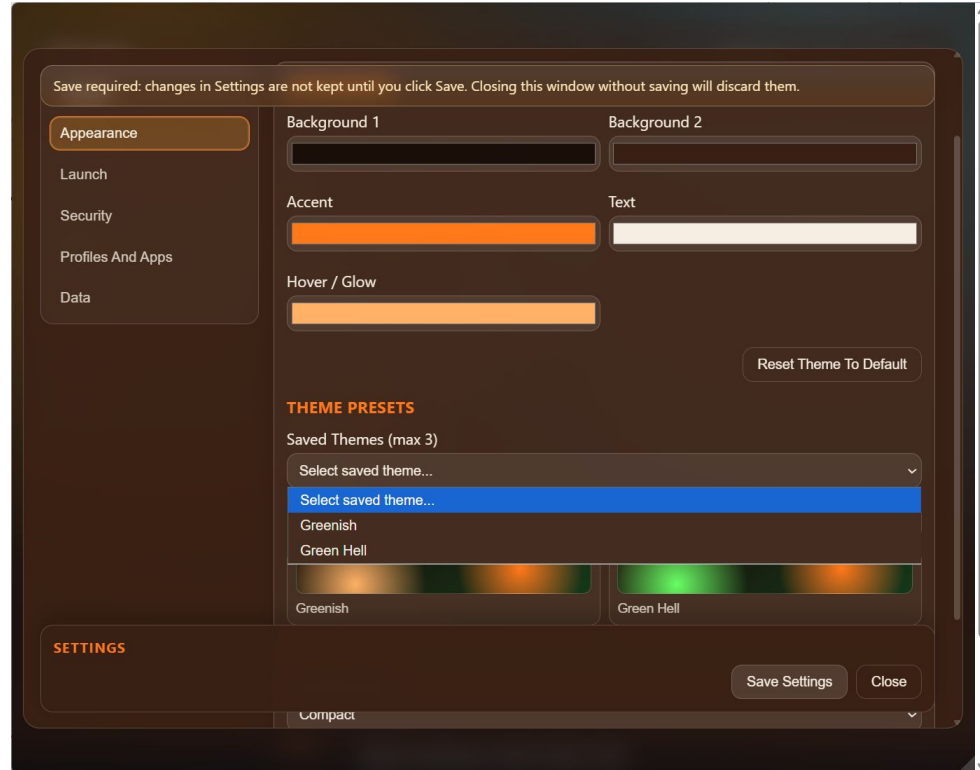

Settings and Personalization

- - Tabbed settings architecture for clear organization
- - Forge-themed default palette (ember/coal/iron direction)
- - Full color customization (background, accent, text, hover/glow)
- - Reset-to-default theme action for quick recovery

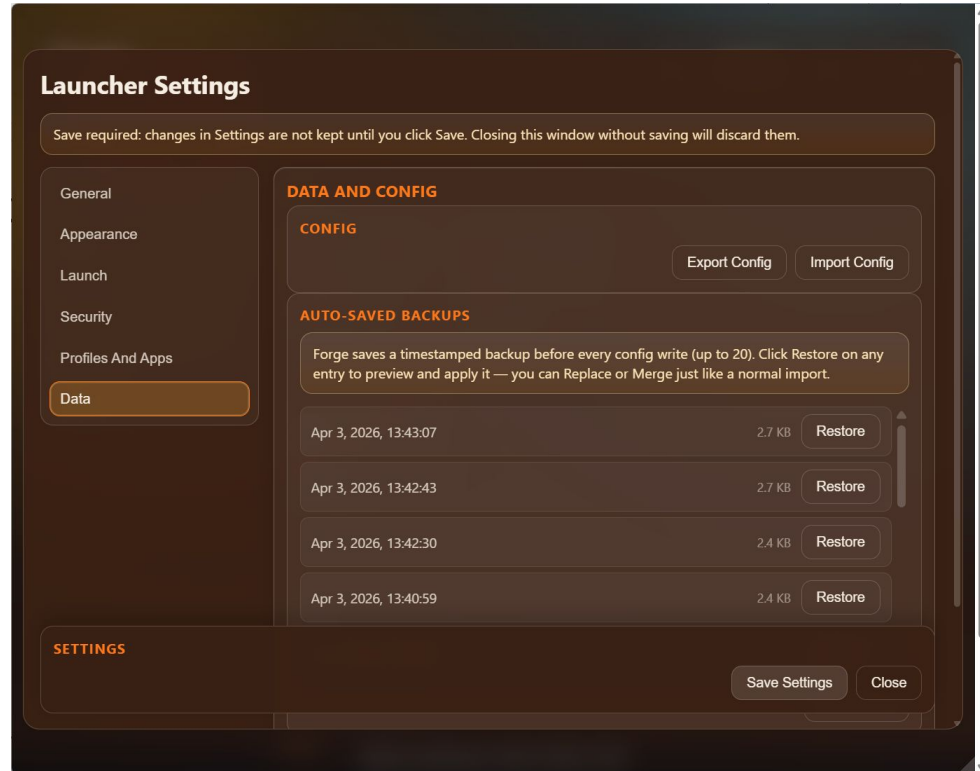

Theme Preset Workflow

- - Save/apply/delete theme presets (max 3)
- - Visual thumbnail previews for each preset
- - Dropdown + thumbnail sync for consistent UX
- - Safe preset merge logic prevents field-loss regressions

Data Safety and Recovery

- - Encrypted config storage in desktop runtime
- - Auto backup created before config writes
- - Backup retention cap for storage control
- - In-settings restore flow via backup list and import preview (replace/merge)

Health, Beta Status, and Next Steps

- Health checks detect broken local paths
- “Fix Path” button on broken tiles jumps directly to the app path editor
- Current beta package ready for family/friend testing
- Next steps:
 - a. Collect tester feedback
 - b. Prioritize UX refinements
 - c. Plan office/work toolkit spinoff on same framework
